---

---

Start a trade when only when the system ACTION is Start BUY or Start SELL.

Start the trade as close to the open price on the Start Date as possible. Just take it don't wait to see what happens.  
Place a long stop at some 300 points away.

You are only interested in 'open/close' figures not intraday.

Conclude the trade when the system indicates <END BUY> or <END SELL> in the 'Profit Take' column or the system 'ACTION' column states END BUY or END SELL.

The END sign in the 'Profit Take' column is generated when the profit falls to or under 75% of the best profit indicated in brown. You may be able to better this figure but take a profit, wait too long and the profit will diminish.

Once a trade is concluded wait for the next action indication to take a new trade. The system does not get back in a concluded trade.

The above logic is used to produce proof of profit. The only difference is that the system does not impose a stop loss when producing its figures.
